- 5-star in Python in Hackerrank.
- 5-star in Problem Solving in Hackerrank.
- 3-star in C in Hackkerank.

PROJECTS

1. **Visual Verse : Illuminating Image Insights**
   03/2024 - 12/2024

   - Caption generation is a difficult artificial intelligence challenge in which a textual description for a given photograph must be created.
   - It necessitates both computer vision technologies for comprehending the image's content and a natural language processing language model.
   - Converting the image's comprehension into words in the correct order.
   - Deep Learning approaches have recently reached state-of-art results.

2. **Tourist Recommendation System**
   07/2023-12/2023

   - The tourism industry is one of the fastest-growing sectors worldwide, with travelers seeking personalized and relevant recommendations for their travel experiences.
   - The primary challenge lies in creating a system that can provide tailored travel recommendations to users based on their preferences.
   - The recommender system designed combines both recommender techniques based on content, and recommender techniques based on collaboration.

3. **Quiz Application For Android**
   12/2022 - 05/2023

   - An application for beginners consisting of quiz of multiple programming languages which helps in enhancing coding skills along with logic and improved learning.
   - This application also evaluates the performance along with the explanation of every wrong answer and provides plus points accordingly.
